Department of Pharmacy Practice; College of Pharmacy

BOTTOM LINE

- Success in the first year of pharmacy school (P1) and P1 GPA are independently predicted by pre-matriculation course withdrawals
- Students with less than two course withdrawals are more likely to have P1 success

PREVIOUS FINDINGS

- Pre-matriculation GPA and PCAT scores have been identified as significant predictors of pharmacy student success^{1,2}
- Pre-matriculation GPA and the achievement of at least a bachelor's degree or higher are associated with higher P1 GPA as well as on-time graduation rates^{1,3}

PRIMARY OBJECTIVE

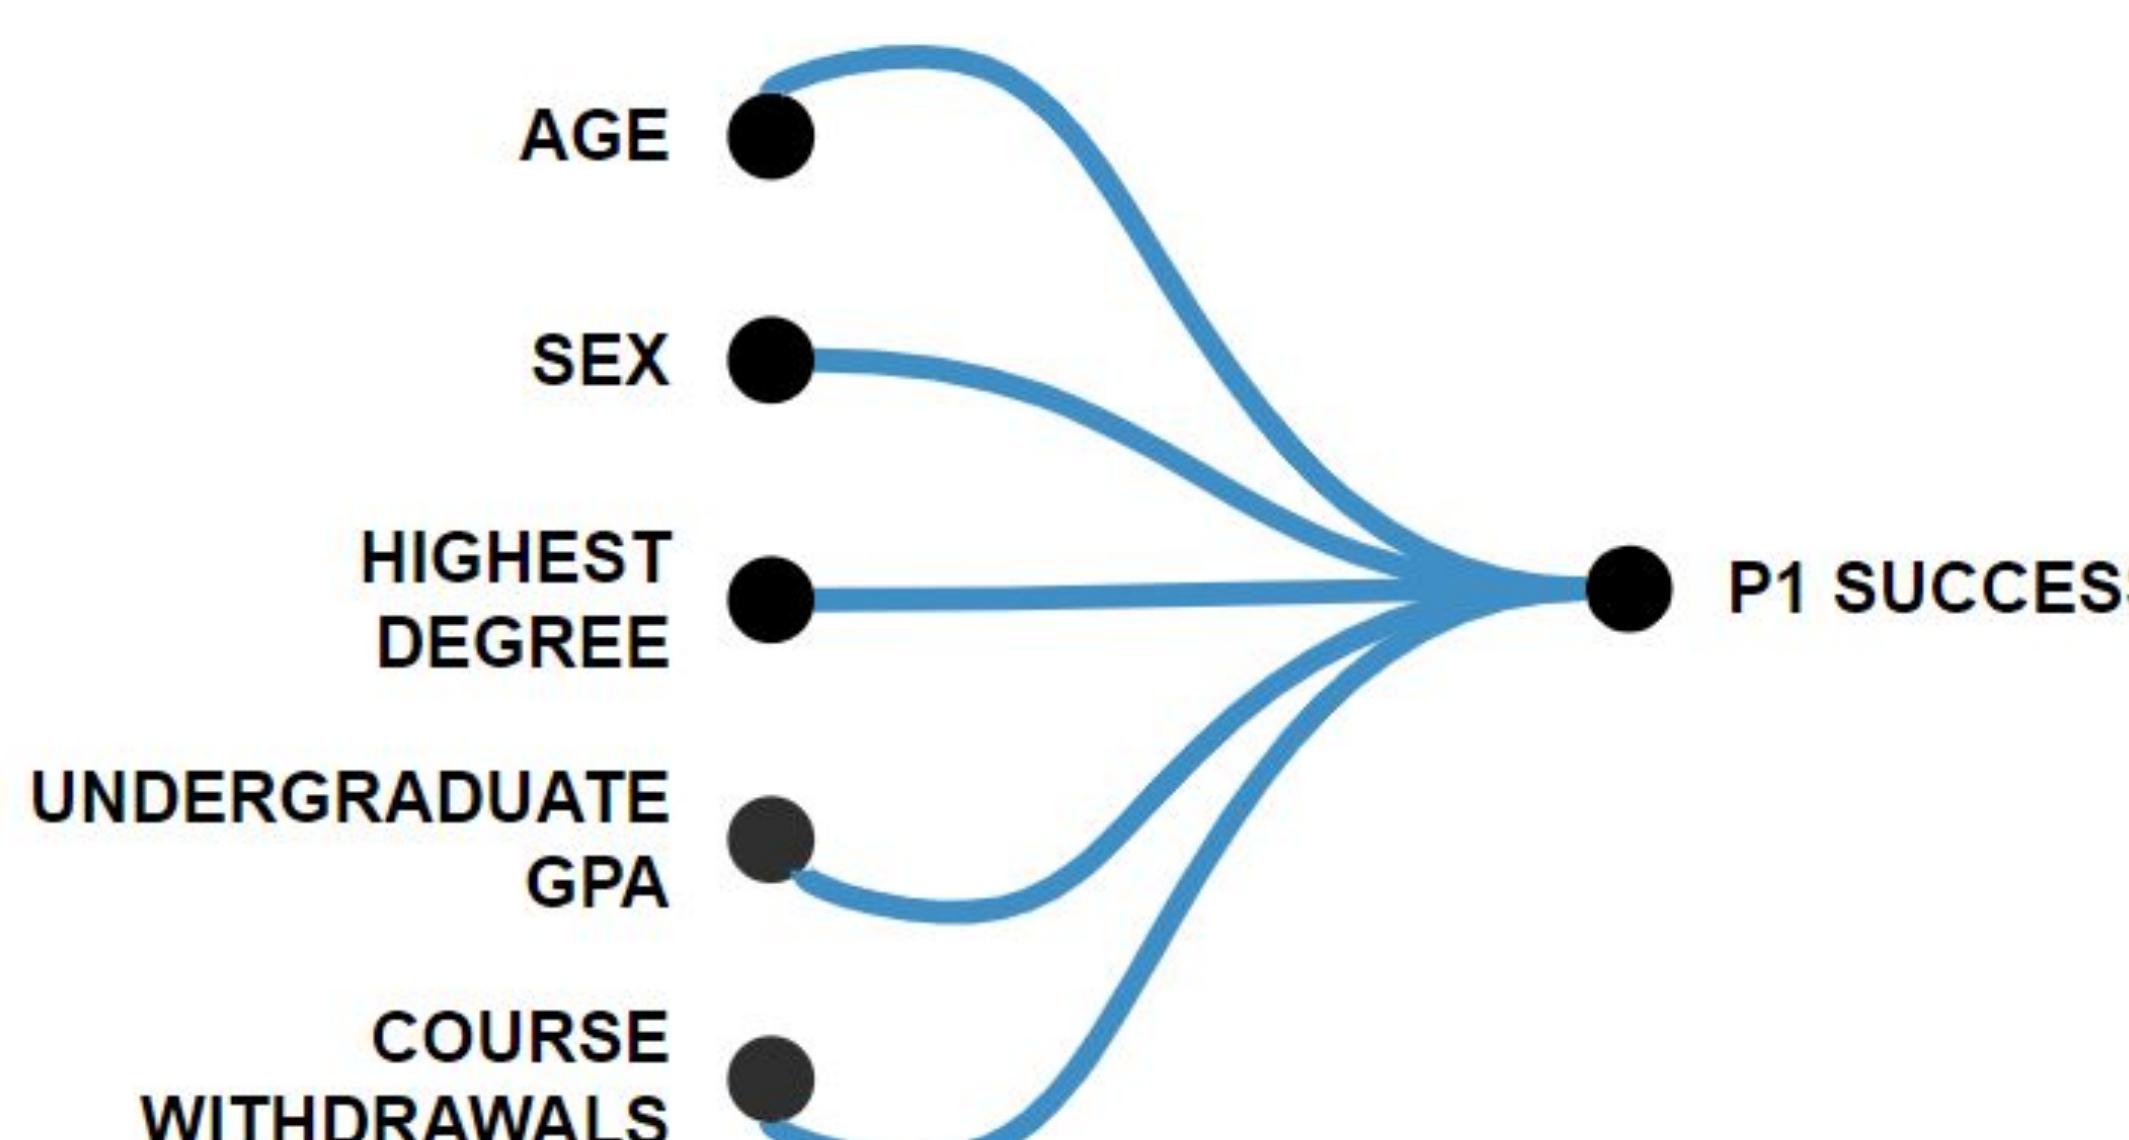

COURSE WITHDRAWALS

P1 SUCCESS

Note: P1 Success was defined as on-time progression to the P2 year without the need for remediation. Remediation is conducted over the summer for students who did not earn a passing grade in a course.

METHODS

- Retrospective review of students matriculating into our college of pharmacy between 2018 and 2021
- Pre-matriculation data was collected from PharmCAS applications and analyzed using bivariate analysis
- Multivariate analysis was used to determine predictors of P1 success and P1 GPA
- P-values<0.05 considered significant

RESULTS

Figure 1. Withdrawal Frequency by P1 Success

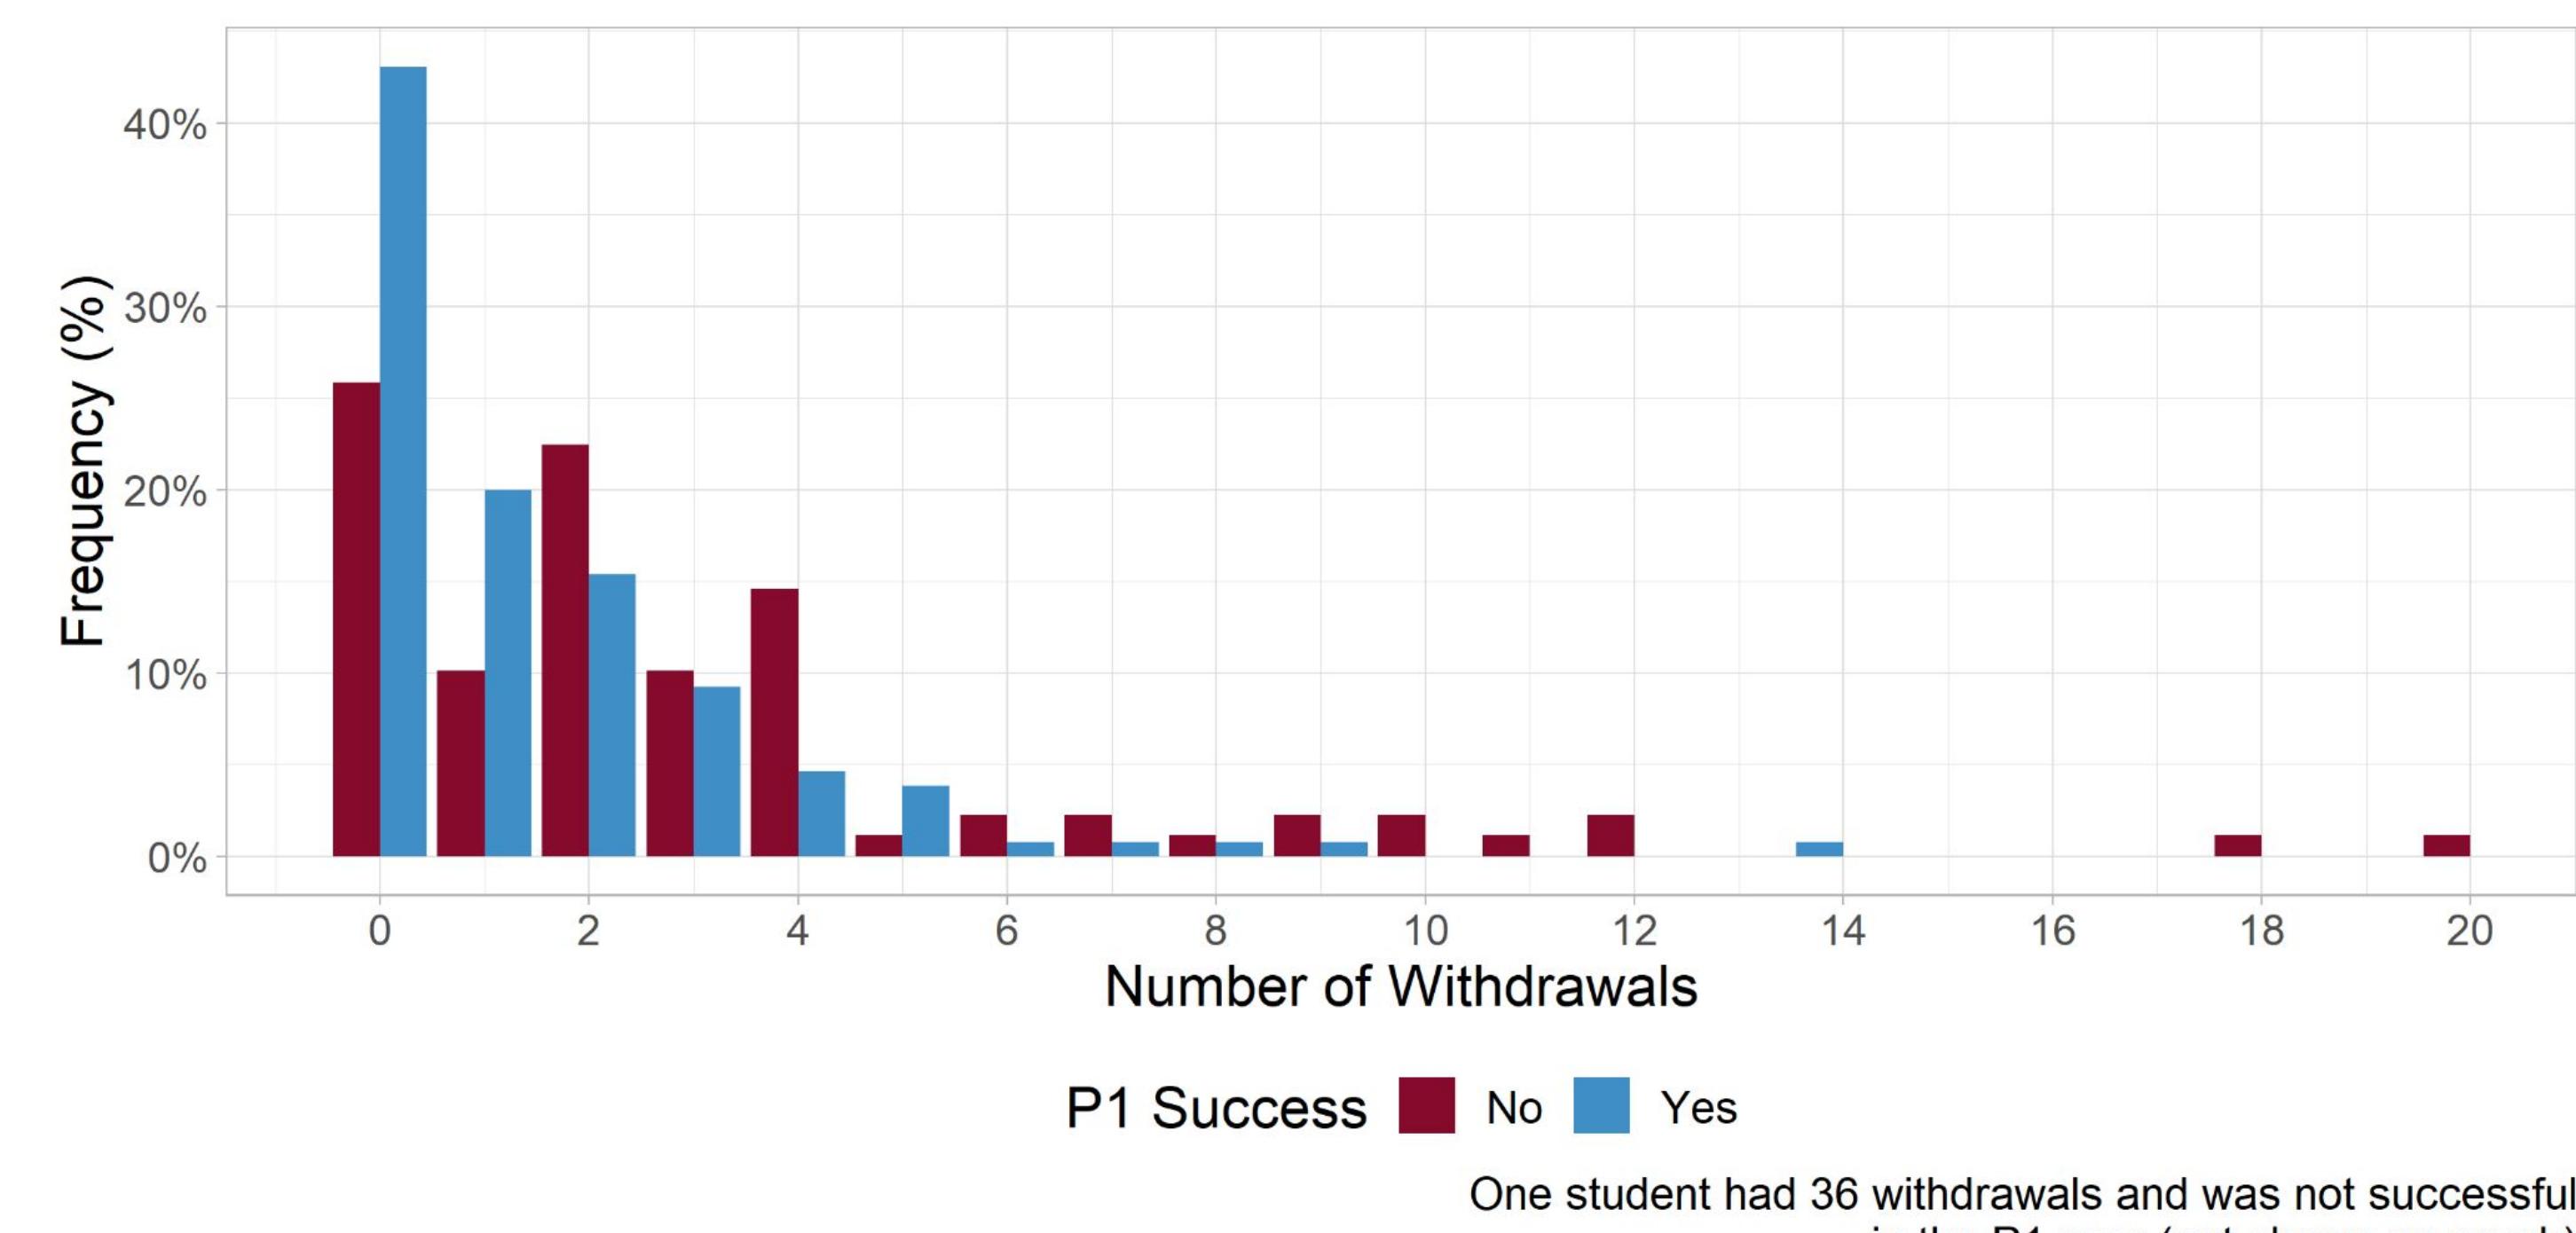

Table 1. Pre-Matriculation Characteristics (N=220)

Characteristic	P1 Success (n=130)	No P1 Success (n=90)	p-value
Female sex, n (%)	84 (65)	56 (62)	0.717
Age, median (IQR)	23.5 (22-25)	25 (23-28)	0.009
Bachelor's degree or higher, n (%)	87 (67)	52 (58)	0.167
Pre-matriculation GPAs			
Cumulative GPA, median (IQR)	2.88 (2.62-3.37)	2.71 (2.42-3.07)	0.001
Science GPA, median (IQR)	2.60 (2.28-3.26)	2.46 (2.17-2.87)	0.019
Course withdrawals			
Median (IQR)	1 (0-2)	2 (0.25-4)	<0.001
Two or more, n (%)	48 (37)	58 (64)	<0.001

Figure 2. P1 Success Status Breakdown

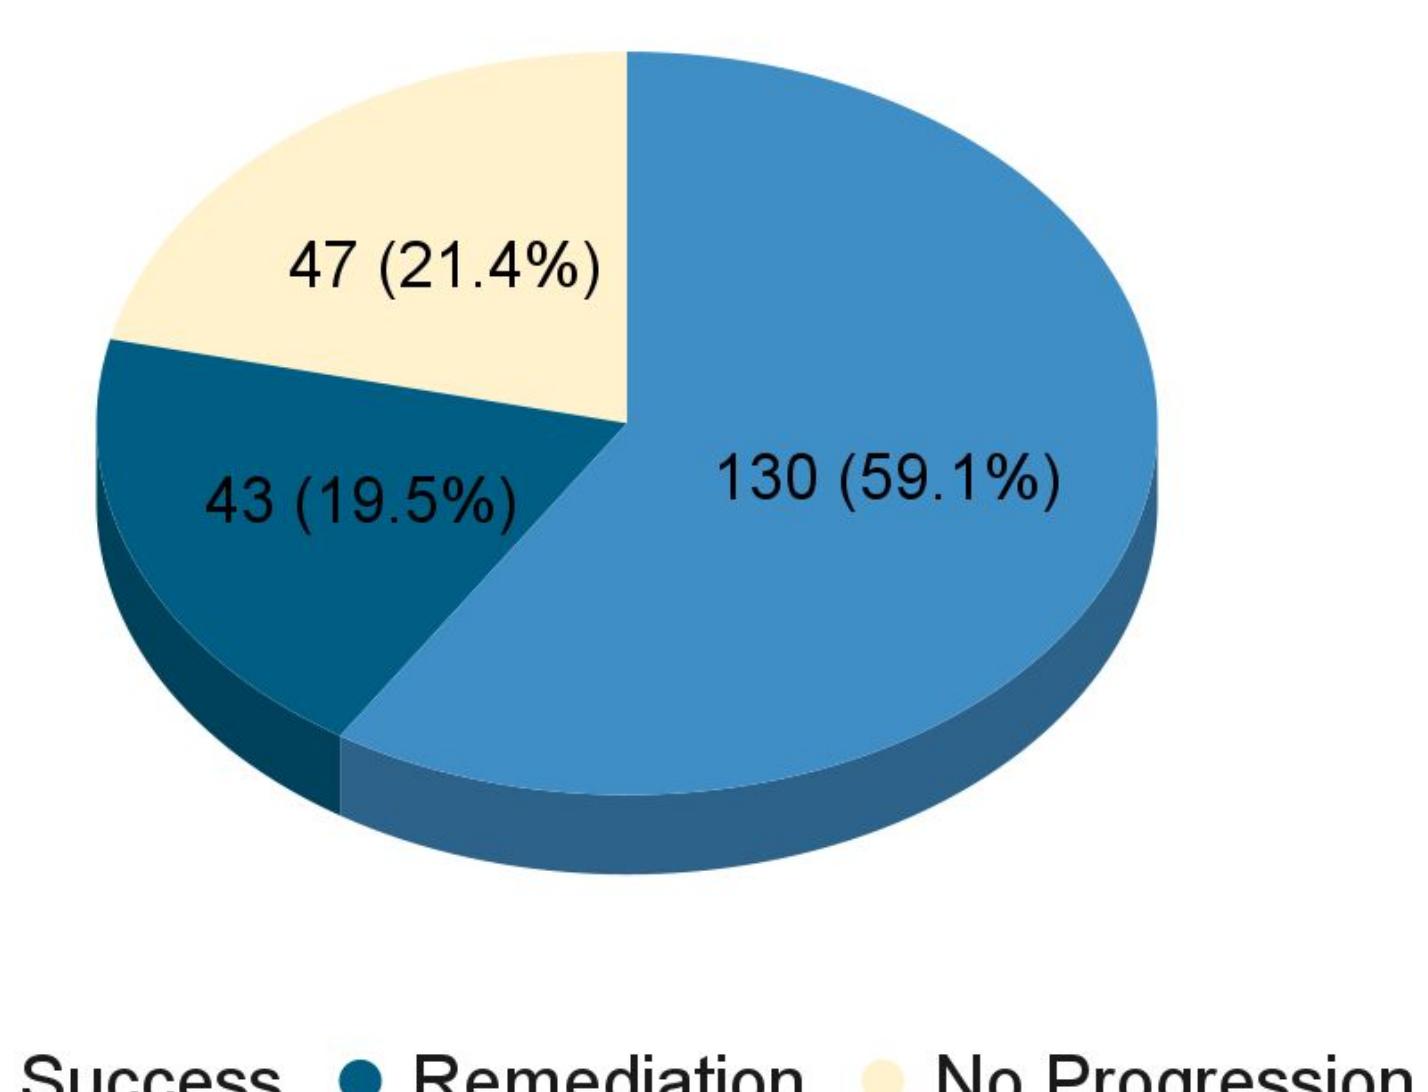

Table 2. Logistic Regression Model for P1 Success

Characteristic	OR	95% CI	p-value
< 2 course withdrawals	2.46	1.36 to 4.49	0.003
Cumulative GPA	1.97	1.07 to 3.71	0.032

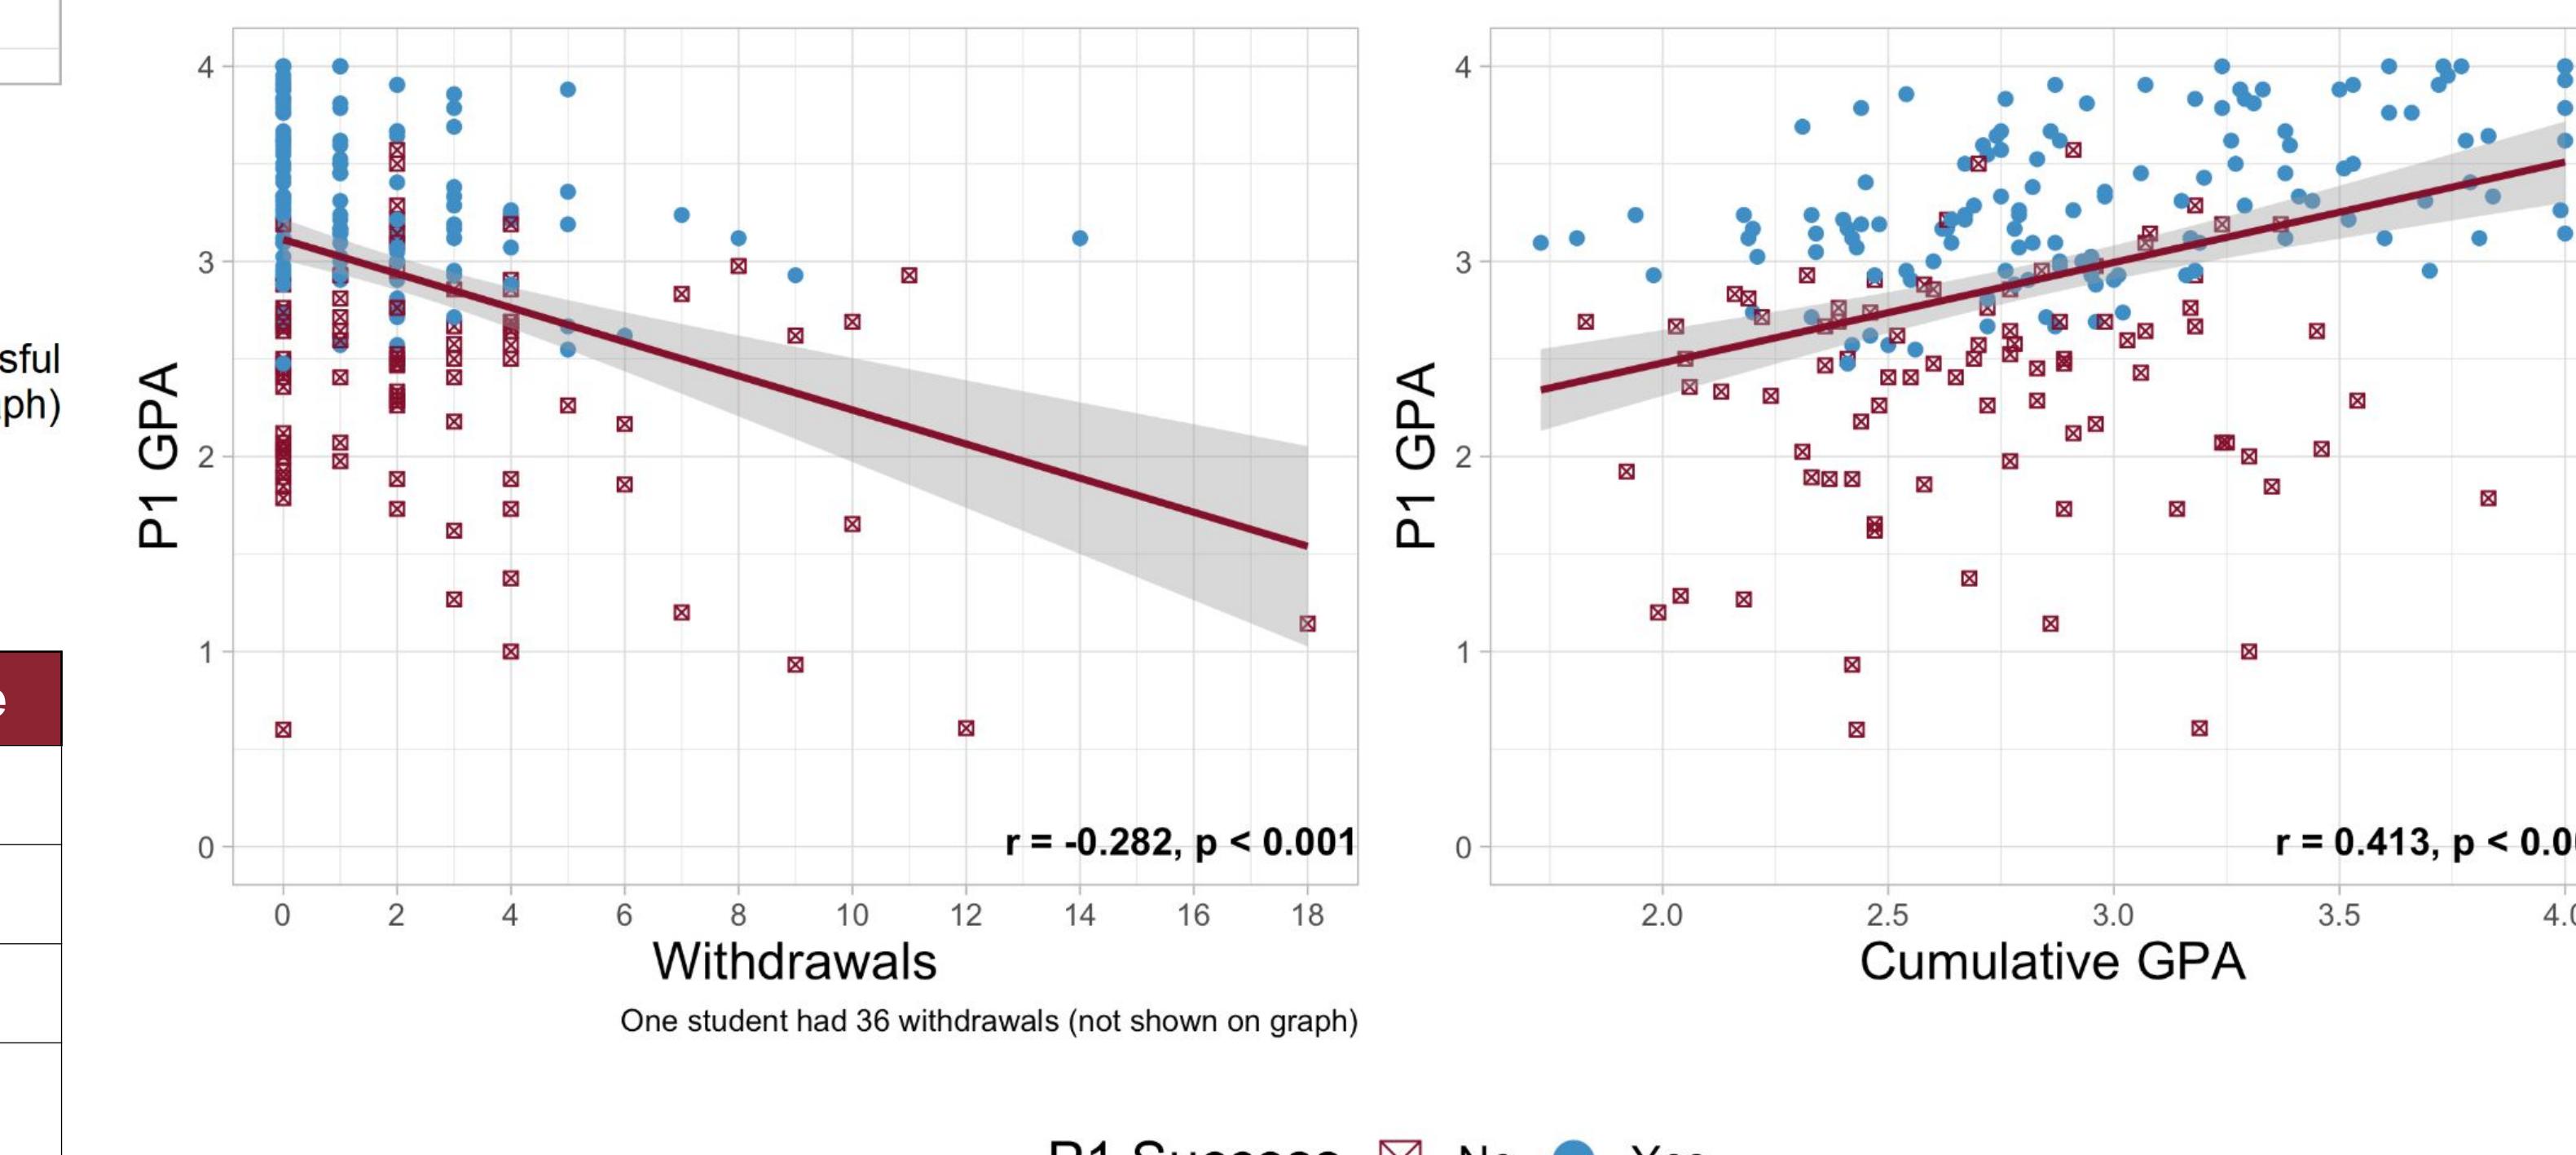

Age, sex, Bachelor's degree, cumulative science GPA, number and semesters with course withdrawals were removed from the final model

Table 3. Linear Regression Model for P1 GPA

Characteristic	OR	95% CI	p-value
Bachelor's degree or higher	0.22	0.05 to 0.39	0.010
Cumulative GPA	0.41	0.24 to 0.57	<0.001
# course withdrawals	-0.05	-0.08 to -0.03	<0.001

Final model $R^2=23\%$, $p<0.001$
Age, sex, cumulative science GPA, and semesters with course withdrawals were removed from the final model through stepwise linear regression

Figure 3. Withdrawal, Pre-Matriculation Cumulative GPA, and P1 GPA

LIMITATIONS

- Transcript data did not include course grades that were "in progress" at time of application
- COVID-19 may have confounded performance and success in both undergraduate school and in the first year of pharmacy school in a portion of our sample

CALL TO ACTION

Admission committees may use pre-matriculation course withdrawal metrics to make admissions decisions and/or identify students requiring greater academic support during the first year of pharmacy school
